

Components

1. Basic Package:

Installation CD with licence for 6 work stations.
Included: 10 reaccall keyboard labels.

2. Extension Package:

Licence for 6 additional work stations.
Included: 10 additional keyboard labels.

3. reaccall-keyboard

Standard keyboard with red reaccall key.

4. Emergency USB Audio Signal

5. USB Panic-Emergency-Pushbutton
and audio-alarm.

We recommend that all operational units (e.g. stress ECG) be equipped with an emergency pushbutton. Other work stations (e.g. doctor's office) should be equipped with an audio emergency unit. Existing keyboards can either be adapted with keyboard labels or be replaced with reaccall keyboards. The basic package authorizes free upgrading to newer versions that will in the future be made available on the reaccall home page.

REACALL

**The Innovative Emergency Alarm
System for Medical Facilities**

How efficient is your Alarm System?

Present day, internationally recognized guidelines set high standards for efficient emergency management. At the same time there is a constant increase in complexity and scope of outpatient medical facilities. The time required for an adequate response is so short that conventional ways of communicating an alarm such as running, calling or phoning often lead to considerable delays. In a worst case scenario this may cause loss of life.

The Innovative Solution

RECALL is an innovative alarm system. It utilizes a route of communication permanently available in most doctors offices and clinics. It allows to transmit with lightning speed an emergency call to all preselected recipients. The optical alarm and acoustic alarm are combined in one system. Place and time of the incident/emergency are transmitted with precision. The system asks the recipients to confirm the call and to concur to the locale of the emergency. The caller's computer screen shows immediate confirmation that his/her alarm has been received. He/she can then focus on providing primary care to the victim. It is also possible to record additional events such as arrival of bystanders, arrival of emergency equipment and first defibrillation. This gives invaluable information for the evaluation of emergency response and for training purposes. All data will be stored in a log and can be used for ulterior evaluation.

Advantages

1. Permanently available
2. Reliable Activation by way of Panic-Emergency-Pushbutton
3. Ultrarapid transmission of call
4. Combination of optical and acoustic alarm
5. Precise information on place and time of emergency
6. Feedback to caller
7. Event data recording
